

PORTABLE BULLET TRAPS

Portable bullet traps are products designed by GISS for improving training activities. They can be used for both conducting shooting or tactical activities in places of permanent dislocation, as well as each time they can be taken to a field to prepare schemes of tactical activities on the training ground.

Portable block bullet trap - KBH500

With uniform firing over the entire surface, a single portable bullet trap can withstand up to 25,000 shots. Importantly, when it's necessary to replace the ballistic blocks, this can be done by one person, which means that the product can be used without long breaks for maintenance.

The KBH500 portable bullet trap is made of Hardstal 500 metal sheets. The entire surface comes with a 50mm thick bullet catching back plate and five 305mm thick ballistic blocks.

Key product features

- Portability - owing to the use of wheels with brakes makes the bullet trap freely movable.
- Long lifetime - the bullet shield can withstand 25,000 shots.
- Easy replacement of components - after individual blocks are worn out, it is possible to easily replace them with new ones.
- No ricochets - owing to the use of our production ballistic blocks encapsulating the bullets, the complete safety of shooters is ensured.
- Extension of the shooting range's life - placing a portable bullet trap in the shooting range significantly extends its life. Shots are directed at the portable bullet trap, not at the shooting range itself.
- Weight - approximately 400kg.
- Dimensions: height - 185cm, width - 80cm.
- Thickness of Hardstal sheet metal - 12mm.
- Thickness of ballistic shields - 35,5cm.
- Firing area - 70cm x 100cm.
- Acceptable ammunition - 9mm Parabellum; 5.56 x 45mm M855; 7.62 x 51mm NATO, 7.62mm x 54R.

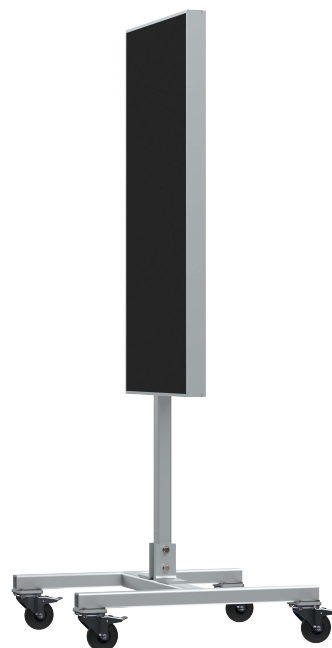

Portable panel bullet trap - KPH500

With uniform firing over the entire surface, a single portable bullet trap can withstand up to 7,500 shots. Importantly, when it's necessary to replace ballistic panel, this can be done by one person, which means that the product can be used without long breaks for maintenance.

The KPH500 portable bullet trap is made of Hardstal 500 metal sheets. The entire surface is made of a 50mm thick bullet catching ballistic panel and two 50mm thick anti-ricochet panels.

Key product features

- Portability - owing to the use of wheels with brakes, makes the bullet trap freely movable.
- Long lifetime - the bullet shield can withstand 5000 shots.
- Easy replacement of components - after individual panels are worn out, it is possible to easily replace them with new ones.
- No ricochets - owing to the use of our production ballistic panels encapsulating the bullets, the complete safety of shooters is ensured.
- Extension of the shooting range's life - placing a portable bullet trap in the shooting range significantly extends its life. Shots are directed at the portable bullet trap, not at the shooting range itself.
- Weight - approximately 180kg.
- Dimensions: height 200cm, width 66cm.
- Thickness of Hardstal metal sheets - 12mm.
- Thickness of ballistic shields - 10cm.
- Firing area - 70x100cm.
- Acceptable ammunition
 - 9 mm Parabellum; 5.56 x 45 mm; M855; 7,62 x 39 mm.

In addition to the above - in case of interest, we will be happy to design and manufacture bullet traps with other sizes, properties and fields of fire. In order to determine the details please contact us by email or telephone.
